

Hey guys, I hope all is well.

Firstly, thank you for downloading the Etherealwinds Harp II: Community Edition! The first Etherealwinds Harp library that was released for free was a lot of fun to take part in, and we really wanted to put more into its successor library, the full version of which features both multiple harp articulations as well as vocal syllables and phrases. To keep the spirit of the original Etherealwinds Harp alive, we also created this free version, which features chromatic stereo sampling, 2 velocity layers, and 2 round robins, plus a sneak peek at some of the effects and vocals we recorded.

Sam from Versilian Studios kindly sent over a few microphones from the US to the UK, perfect for recording my 34-string Iona Celtic Harp, and we went through the sampling process together, thanks to the power of the Internet. The Versilian Studios team put a lot of work in, a lot of which I can't myself fully grasp. Thus, here we are. So, I hope you will get a lot of use and enjoyment out of the library and I look forward to hearing what everybody makes out of it. You are more than welcome to use this library both commercially and non-commercially in your work, and let us know what you make!

Cheers!

Jordi Francis (etherealwinds)

To install the vst (.dll file + .instruments folder) version of this library, you will need:

- 340 MB of free hard drive space (+ 95 MB for installation files)
- 7-zip, WinRAR, or other .rar-uncompressing utility.
- A DAW capable of loading and using VSTi files.

Begin by extracting the .rar file. Navigate to where your VSTi are installed for your DAW of choice (you can find this in the DAW preferences if you do not know). Copy the "EWHarp2_Win##.dll" file and "EWHarp2_Win##.instruments" folder from the contents of the .rar file, then paste them into the VSTi folder. Restart your DAW and/or scan for plugins and it will appear.

To use vocals/fx, drag and drop the .wav file into an empty audio track in your DAW.
